

LOCAL INTRODUCTION

Keelung is located in northern Taiwan, ringed on three sides by mountains, only a small plain in the north is facing the ocean, as the deep water bay, Keelung Port. The harbor goes deep into the urban area, and the water surface is wide. It combines a commercial port, a military port, and a fishing port in one. It is the gateway to northern Taiwan.

Affected by the terrain and the northeast monsoon, Keelung is often rainy in winter, and the average temperature is only about 22 degrees Celsius. It is called the "city of the rainy harbor". Keelung is a rainy port as well as a fishing port. The fish market has a wide variety of fishery products. There are many types of offshore and inshore fishery products from all over the world, as well as the fresh fish that are caught on the day. The fish market in Kanzaiding is said to be the most dynamic and the most interesting fish auction market in Taiwan.

At the marina next to Keelung Railway Station, you can take a yacht to visit Keelung Port. The coastal landscape is quite beautiful. At the sea, you can see the landscape, the luxury cruise ships from all over the world, the life of a busy harbor, the azure blue sea water, and the seasons in the life of Keelung people. Living with the people of Keelung in four seasons, the blue road trip is a popular water-based leisure activity recently

During the Guangxu reign of the Qing Dynasty, in order to strengthen coastal defense, the Baimiweng Fort, Ershawan Fort (Sea Gate Natural Fortress), Dawulun Fort and other wartime monuments were left in the Keelung area. Visiting the sights and ancient times, the fierce battles of the old days have long been dusty. The majestic landscape of the bunker is lined with the endless blue sky and sea. For hundreds of years, Keelung has visited numerous foreign ships and brought diverse cultures and knowledge. It is a port for communications between Taiwan and the world, and it is also an important cultural port in Taiwan's history. The convergent international port city of giant ships, the lively and magnificent Zhongyuan Festival, various exquisite temple snacks, as well as forts and tunnels, capes and bays, fishing ports and fish markets, etc. Visiting these spots is lingering.

CENTER INTRODUCTION

The Keelung Chang Gung Hospital Community Medical Research Center (CMRC) is based in Northern Taiwan and dedicated to large-scale local generation research. Since its inception in August of 2013, the CMRC has aimed to develop a comprehensive and integrated approach to disease prevention and community health.

Youth is the time of life when one is young, but often means the time between childhood and adulthood (maturity). It is also defined as "the appearance, freshness, vigor, spirit, etc., characteristic of one wOver time, with the accumulation of data and study results, the CMRC aims to reveal risk factors of chronic diseases and further apply our research in clinical settings. Our findings will facilitate novel approaches in disease prevention, disease intervention and healthcare policy, which will in turn establish the CMRC as a leading international research center in the field of community medicine.

The CMRC organizes healthcare outreaches for residents over the age of 20 in four areas including Keelung City, Wanli District, Ruifang District and Gongliao District to conduct a comprehensive range of health related activities such as health examination and disease awareness session.

CMRC

CENTER INTRODUCTION

We aim to establish a multinational network with similar research groups to not only exchange practical experiences, but also elucidate the differential disease risk factors in chronic liver disease, chronic kidney disease, mental health and metabolic disorder across cohorts of highly diverse racial, cultural, and economical demographics.

Furthermore, on the academic front, the CMRC aims to establish disease biomechanics, signal transduction pathways, genetic mutations, and animal models; which will contribute to the foundations of novel drug discovery platforms.

In summary, these highly translational research approaches will allow the CMRC to branch out into a wide gamut of medical fields such as disease treatment, disease diagnostics, provide proving grounds for novel interventions, precision medicine, and disease prevention; and cement the CMRC as a high caliber research center in the field of community medicine.

The community-based cohort study cumulative total: (As of 31 Oct, 2022)
Cases received: 22,542
Follow-up cases: 7,977
Second round follow-up cases: 5,078
Third round follow-up cases: 3,706
Fourth round follow-up cases :2,718
