

Anaesthesia science

2006 466 pages hardback

ISBN-10 0-7279-1773-0

Table of Contents

Part 1: Pharmacology

- 1 Pharmacokinetic principles
- 2 Pharmacodynamics
- 3 Pharmacogenomics
- 4 Receptors and second messenger systems
- 5 Anaphylaxis
- 6 Reflections on chirality
- 7 Ion channels
- 8 Immunosuppression
- 9 Mechanisms of anaesthesia: a role for voltage-gated K channels?
- 10 Use and abuse of antibiotics

Part 2: Physiology

- 11 Inflammation and immunity
- 12 Shock: pathogenesis and pathophysiology
- 13 Cellular physiology
- 14 Acid-base balance: albumin and strong ions
- 15 Fluids and electrolytes
- 16 The microcirculation
- 17 Respiratory physiology at the molecular level
- 18 Non-respiratory functions of the lung
- 19 The brain as a site of inflammation after acute injury
- 20 Heart failure
- 21 The hormonal and metabolic response to anaesthesia, surgery and trauma
- 22 Temperature regulation
- 23 Theories of pain
- 24 Neuromuscular transmission and function

Part 3: Clinical measurement

- 25 Magnetic resonance imaging
- 26 Nanotechnology
- 27 Assessment of the cardiovascular system
- 28 Assessment of respiratory function
- 29 Monitoring the depth of anaesthesia
- 30 Research study design
