Book Review

- Review of *Pseudohypacusis: False and Exaggerated Hearing Loss* 168
Mahindra A. Ramdhanie, AuD

Cover image: Scanning electron microscope images of vocal fold fibroblasts. (A) Day 0. (B) Day 1. (C) Day 3. (D) Day 7. At day 1, cells behaved like anchors within the pores of the collagen/gelatin sponge. Intercellular adhesion was observed at day 7. From "Biocompatibility and Efficacy of Collagen/Gelatin Sponge Scaffold With Sustained Release of Basic Fibroblast Growth Factor on Vocal Fold Fibroblasts in 3-Dimensional Culture" by Hiwatashi et al, pp 116-125.
