書名：Practical decision making in health care ethics

作者：Raymond J. Devettere

內容簡介：For nearly fifteen years Practical Decision Making in Health Care Ethics has offered scholars and students a highly accessible and teachable alternative to the dominant principle-based theories in the field. Devettere's approach is not based on an ethics of abstract obligations and duties, but, following Aristotle, on how to live a fulfilled and happy life-in short, an ethics of personal well-being grounded in prudence, the virtue of ethical decision making. This third edition is revised and updated and includes discussions of several landmark cases, including the tragic stories of Terri Schiavo and Jesse Gelsinger (the first death caused by genetic research). Devettere addresses new topics such as partial-birth abortion law, embryonic stem cell research, infant euthanasia in The Netherlands, recent Vatican statements on feeding tubes, organ donation after cardiac death, new developments in artificial hearts, clinical trials developed by pharmaceutical companies to market new drugs, ghostwritten scientific articles published in major medical journals, and controversial HIV/AIDS research in Africa..

目錄：

- 1 What is ethics?
 - 2 Prudence and living a good life
 - 3 The language of health care ethics
 - 4 Making health care decisions
 - 5 Deciding for others
 - 6 Determining life and death
